3. Project Details

Title	An AI-Based Intelligent System for Automatic Complaint Categorization and Routing
Broad Area / Deliverable	Artificial Intelligence and Machine Learning focused on Natural Language Processing (NLP). The project is a web-based application that automatically classifies user complaints and routes them to the appropriate departments using machine learning.
Expected outcome	The expected outcome of this project is to develop an intelligent complaint management system capable of accurately classifying complaints based on textual content and routing them automatically to the concerned departments.
Beneficiary	The primary beneficiaries of this project include organizations such as customer service departments, government grievance portals, e-commerce platforms, and telecom or banking sectors.
Nature of the project: Inhouse/External. If External, give details	This project is an Inhouse project, developed within the institution under the guidance of faculty members.
Scope of the Project within Sustainable Development Goals (SDG) or Not. If Yes, Give details	Yes, the project aligns with Sustainable Development Goals (SDGs), particularly: SDG 9 (Industry, Innovation, and Infrastructure): Promotes innovation by implementing AI-based automation in complaint management systems. SDG 16 (Peace, Justice, and Strong Institutions): Enhances transparency, accountability, and efficiency in grievance redressal systems by ensuring faster and accurate complaint handling.
Scope for Patentability/ Start Up	The project has strong potential for patentability and startup development. The integration of AI-based NLP models for automated complaint categorization and intelligent routing can be extended into a scalable SaaS platform.
Expected Date of completion	Mar-26

4. Abstract (Not more than 200 words)

This project focuses on developing an AI-based Intelligent Complaint Categorization and Routing System to automate the process of handling user complaints efficiently. Traditional complaint management systems rely on manual processing or rule-based approaches, which are time-consuming and prone to errors. To overcome these limitations, the proposed system utilizes Natural Language Processing (NLP) and machine learning techniques to analyze and classify complaints based on their textual content.

The system processes raw complaint data through preprocessing, feature extraction, and classification using advanced models to accurately determine the category of each complaint. Once classified, the complaint is automatically routed to the appropriate department, reducing manual intervention and response time. The system also includes a user-friendly interface and an administrative dashboard for monitoring and analytics.

5. Declaration from students

We will carry out this project and complete the same within the stipulated Period. We understand that it is our moral duty to carry out the project for our own professional growth and for serving the society.We will prepare a work plan in consultation with our Internal and /or External Guide and strictly follow the same. We assure that we will maintain professionalism and good work ethics.

Signature of Team Leader **Signature of Members**

6. Declaration from Guide

I understand that it is my moral duty to
a) Help the students in completing the projects on time
b)To either publish the work as a paper in a good quality journal or apply for patent
c) Will help students in establishing a start up based on their interest
d) Motivate the students for participating in project competitions

Signature with Date

7. Endorsement from HoD

The Department ensures that all the technical and personal support will be extended to the team for the smooth and successful completion of the Project.
